-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Griswold (US005371436A).

In regard to claims 1-2 and 5, Griswold's device discloses a spark plug terminal (see figs 1-21) electrically and mechanically connected to a spark plug cable terminal (28), comprising : a cotter pin ( see attachment) which is inserted on a portion of said spark plug terminal; a spacer at 238 or 132 which is positioned on said spark plug terminal; a coiled spring (246) located adjacent to said spacer whereby the spring pressure is applied against the spacer; a slotted spark plug cable terminal; and a sliding spark plug cover at 126; wherein the slotted spark plug cable terminal sitting on the spring loaded spacer and being hooked up by the cotter pin so as to form an interlocking mechanism. However, Griswold's device fails to explicit disclose the cotter pin being placed in the upper portion of the plug terminal. It would have been obvious to one having ordinary skill art at the time the invention was made to place the cotter pin being placed in the upper portion of the plug terminal, since it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japikse, 86 USPQ 70. It would have been obvious to one having ordinary skill art at the time the

invention was made to place the cotter pin being placed in the lower portion of the plug terminal instead of upper portion in order to improve the interconnection of plug terminal in Griswold's device.

In regard to claims 3-4, Griswold's device discloses the aforementioned limitations including the cover with the sliding features along the plug cable terminal, and the pressing (pushing force) and turning limitations (the treading features or see fig. 20).
